ACKNOWLEDGMENT

The Digital Identity Tracker® is done in collaboration with Jumio, and PYMNTS is grateful for the company's support and insight. PYMNTS.com retains full editorial control over the following findings, methodology and data analysis.

WHAT'S INSIDE

Digital banking has been a boon to consumers who are avoiding brick-and-mortar branch visits during the pandemic, but financial institutions (FIs) are still facing several challenges as more customers take their financial habits online. One significant friction plaguing many banks is their lack of digital verification solutions — especially when it comes to account setup. A recent [FICO report](#) revealed that 51 percent of FIs in the United States and Canada still require customers to prove their identities by visiting bank branches or providing physical documents to open accounts online, for example.

There are several innovative solutions that can help banks change course on their digital ID strategies, however. The same shift that is prompting many consumers to seek cutting-edge digital and mobile banking experiences is also making them more comfortable with new technologies like biometrics. Seventy-one percent of consumers in a recent [survey](#) said they would be comfortable uploading selfies, scanning their fingerprints or providing voice-based biometrics to their banks, for example, and just 13 percent felt FIs should not be able to access their biometrics.

This is not to say that adopting digital verification solutions will be a light lift for banks. Know your customer (KYC), anti-money laundering (AML) and nation-specific data privacy rules can make it challenging for FIs to determine which measures will work best for their organizations, but investing in robust digital ID solutions is likely to be well worth it in the long run.

Around the digital ID space

Digital ID and biometric technologies hold great promise for banks looking to streamline their digital verification measures, but a recent [survey](#) revealed just how important it is for FIs to ensure that they are getting the most out of these tools. It found that 30 percent of FIs, even those that are using digital ID solutions, are still requiring customers opening additional accounts to complete applications wholesale rather than relying on streamlined authentication measures to simplify the process. This illustrates that many banks can still do more to ease account opening for their customers.

Some banks are turning to partnerships as they work to upgrade their digital banking experiences.

EXECUTIVE INSIGHT

Many U.S. FIs continue to rely on paper-based ID verification procedures that complicate the customer onboarding experience. What are some of the key reasons that have stopped FIs from digitizing their ID verification procedures and what kinds of ID verification tools hold the most promise to improve the onboarding experience?

“Most traditional financial institutions and banks will leverage a variety of tools and third-party databases to corroborate the identity and risk assessment of a new customer. In fact, some larger banks use as many as 70 different solutions that are cobbled together to help address those fundamental questions of identity and risk. This can prove daunting when trying to digitize the process. According to Gartner, by 2023, 75 percent of organizations will be using a single vendor with strong identity orchestration capabilities and connections to many other third parties for identity proofing and affirmation, an increase from fewer than 15 percent today. Rather than having individual solutions pieced together, financial institutions should be looking for an identity proofing platform — like the Jumio KYX Platform — that combines services and technology like identity verification, biometrics, fraud signals, AML monitoring and authentication to accurately establish, maintain and reassert trust from account opening to ongoing transaction monitoring.”

PHILIPP POINTNER
Chief product officer at [Jumio](#)

Bahrain-based Al Baraka Islamic Bank recently [announced](#) that it would team up with digital ID verification solution provider Jumio to boost its mobile onboarding procedures, for example. The FI said Jumio’s facial recognition technology would allow mobile banking app users to take selfies for comparison with official photo IDs during account sign-up. The solution uses liveness detection to ensure that legitimate customers are present when snapping their selfies.

Biometric solutions are also catching on for applications outside the banking sector. The U.S. Customs and Border Protection (CBP) agency recently [reported](#) that it conducted facial recognition scans on 23 million travelers in 2020 — a 21 percent increase from the 19 million scanned in 2019. The agency said that the scans achieved a match rate of more than 97 percent last year and noted that its officers have used the technology to spot seven impostors at airports and 285 in other settings since 2018.

For more on these stories and other digital ID headlines, read the Tracker’s News and Trends section (p. 10).

How real-time digital ID verification helps TD Bank strike the seamless and secure balance

Many banks in the U.S. and Canada still believe customer onboarding and new account opening are best-suited for in-branch interactions, but the pandemic has forced FIs to reassess as more consumers turn to digital channels for their banking activities. Biometric tools, such as facial recognition, fingerprint scans and voiceprints, are just a

few methods banks can deploy not only to ease customer onboarding but also to offer real-time ID scoring and frictionless security, according to Angel Kadelski, head of U.S. mobile banking platforms for [TD Bank](#). In this month's Feature Story (p. 7), Kadelski discusses why the future of digital ID verification in the banking space will involve a combination of solutions to meet customer identification program (CIP) and KYC requirements.

Deep Dive: How banks can leverage innovative ID verification tools to modernize onboarding

The pandemic has caused more consumers than ever to seek the convenience and safety of online

and mobile banking solutions, but more than half of banks in the U.S. and Canada still request that consumers prove their identities when opening new accounts online by visiting branches in person or submitting paper documents. This month's Deep Dive (p. 14) examines how banks can optimize digital ID verification during the onboarding process to both modernize the banking experience for users and deter them from abandoning account setup.

FIVE FAST FACTS

50%

Portion of consumers who use mobile banking apps

31%

Share of consumers who are dissatisfied with their account opening experiences

88%

Portion of mobile banking app users who use their apps to check their account balances

90%

Segment of mobile banking app users who want more control over their identity authentication measures

28%

Share of mobile banking app users who say they would use them more if they had transaction-specific authentication controls

TD Bank On The Case For Real- Time Digital ID Verification

FEATURE STORY

When *The New Yorker* published its most [reprinted](#) cartoon in the magazine's history by cartoonist Peter Steiner in 1999, the internet — and digital identity — was still in its infancy. The cartoon featured a dog sitting at a desk, paw on a computer, saying, “On the Internet, nobody knows you’re a dog.” More than two decades later, the pandemic has created the perfect storm for shady cybercriminals to hide behind online anonymity to exact their schemes, with more consumers moving to digital channels for their daily activities than ever before. FIs and businesses fortunately have the opportunity to digitally confirm that users are who they say they are when communicating and transacting online.

The timing is right to accelerate the adoption of these tools to confirm consumers' identities with

one or more biological traits. Digital ID solutions have become essential to onboarding for new account openings, though a [survey](#) by FICO found that only 49 percent of U.S. and Canadian banks use digital ID verification methods for these processes. The study further showed that just 16 percent of these banks use integrated, real-time digital validation tools for consumers to securely open financial accounts online.

Angel Kadelski, head of U.S. mobile banking platforms for [TD Bank](#), acknowledged that many FIs still consider customer onboarding risky and best-suited for in-person interactions — especially when it comes to CIP and KYC procedures and the general need to fight fraud. She said there are nonetheless opportunities for digital ID verification solutions to ease the onboarding experience,

fulfill stronger CIP practices and protect FIs from cyberattacks.

“Digital ID solutions for customer onboarding can actually improve CIP and KYC practices because you can triangulate and verify the authenticity of various data points that you cannot achieve in a face-to-face interaction with a potential customer,” Kadelski said.

The importance of real-time verification

Among the data points that can be combined to score an individual’s ID digitally, she said, are real-time validation of IDs matching government databases; cross-references with sanction lists; geolocation verification; biometric capabilities that use facial recognition to match consumers with photo IDs; credit bureau and social media data to confirm relationships between consumers and their businesses; and device identification to confirm that applicants are not bots.

Biometrics not only can simplify verification to keep customers from abandoning the process but also can help banks meet CIP requirements when in-person interactions are challenging — such as during a pandemic. TD Bank uses fingerprint and facial recognition biometrics to verify customers on its branded mobile app. The bank also enables customers to use voice recognition to confirm their identities when they call its contact centers. Customers who enroll in TD VoicePrint no longer need PINs, security questions or passwords. Selfie ID capture — or the comparison of a selfie against a government-issued photo ID — is another method that some FIs are using to reduce customer frictions.

“I expect the use of both existing and new biometrics to expand to other use cases across digital, including within physical branches,” she said. “The reason is not necessarily to be a sole or primary authentication solution, but as an additional authentication method for customers who may have failed traditional means or may have been flagged for a high-risk transaction that needs an extra layer of verification.”

The customer convenience balance

Kadelski noted that customers have come to expect convenience, especially as innovative digital experiences are being introduced at much faster rates across industries.

“Banks are left with having to meet those customer expectations to stay relevant and competitive with nontraditional FinTechs while also having to ensure they are providing safe and secure experiences,” she said.

Innovative ID solutions can address both sides of this balance if done right, she added. Smart identification processes that can score identities in real time across multiple categories can help banks eliminate barriers to onboarding new customers — or to satisfying existing ones as they come to expect frictionless, end-to-end experiences.

The future of digital ID verification will require a combination of solutions, including both biometrics and entity data. FIs that once relied on face-to-face interactions in-branch to prove customers’ identities will therefore need to rethink how to adapt to the pandemic-driven, digital-first economy.

NEWS & TRENDS

Digital ID and the rise of online banking

Most banks in US and Canada still require branch visits to open accounts

Consumers are coming to expect smooth digital services in their financial lives, but recent research suggests that they are still facing hurdles when it comes to verifying their identities in the online banking space. A new [survey](#) from data analytics firm FICO revealed that 51 percent of U.S. and Canadian banks still require customers to prove their identities by visiting brick-and-mortar branches or posting copies of physical documents when opening accounts online. The study also noted that while the remaining 49 percent of respondents were using digital methods to verify customers' identities when they opened new accounts, just 16 percent were tapping fully integrated digital validation tools that allowed consumers to securely open accounts online in real time.

There is evidence to suggest that financial institutions are heeding the call to adopt more robust digital verification methods, however. Liz Lasher, a vice president at FICO, said the pandemic is

forcing U.S. and Canadian FIs that have relied on face-to-face interactions for identity verification to rethink their approaches. Seventy-five percent of the region's banks are planning to invest in identity management services by 2024, for example.

US bank customers face frictions regarding biometric usage and account opening, survey finds

Even the FIs that are adopting emerging digital verification measures must ensure that they are utilizing these solutions to the fullest extent to keep customers satisfied. A new [survey](#) found that 30 percent of FIs are still asking customers to complete applications to open new accounts instead of offering secure authentication measures to ease the process. It also revealed that just 50 percent of U.S. banks allow their customers to alter personal details, such as their PINs, or to seek new debit products online, and most have failed to seamlessly enable remote account opening procedures using biometrics.

The report found that two-thirds of banks make it simple for customers to access new services, but consumers said that only 35 percent of these processes are easy to use. Seventy-five percent of

banks also require additional security verification measures when customers attempt to transfer money to external accounts. The survey concluded that biometric verification methods could go a long way toward helping FIs streamline their account opening processes and online banking transactions and ultimately prevent consumers from switching to other FIs.

Jumio partners with Al Baraka Islamic Bank on digital banking app leveraging biometrics

Many FIs are recognizing the need to update their digital banking approaches, and some are turning to third-party partners to provide smooth verification methods for these new offerings. Bahrain's Al Baraka Islamic Bank recently [announced](#) that it is working with digital identity verification solution provider Jumio to bolster its mobile onboarding processes, for example. The FI will leverage Jumio's facial recognition platform to match mobile banking app customers' selfies with their official photo IDs, and liveness detection is employed to ensure that legitimate users are present when their selfies are taken.

The partnership will allow Al Baraka Islamic Bank's customers to open accounts via their mobile devices, freeing them from having to visit brick-and-mortar branches to provide identity documents. Dean Hickman-Smith, Jumio's chief resource officer, noted that the move will help the bank streamline its electronic know your customer (eKYC) verification procedures and give its customers a way to remotely and securely open accounts without relying on face-to-face interactions.

Biometrics usage worldwide

US Customs and Border Protection reports 23 million travelers received facial recognition scans in 2020

Biometric solutions are also witnessing increased usage outside the banking sector. The U.S. Customs and Border Protection agency recently [reported](#) that it used facial recognition scans on 23 million travelers last year — up 21 percent from the 19 million it scanned in 2019. The CBP said that these scans boasted a match rate of more than 97 percent in 2020 and that the technology has helped its officers discover seven impostors at airports and 285 in other settings.

Some have voiced concerns regarding the agency's use of facial recognition technology at airports, however, claiming that such solutions risk compromising individuals' privacy in the name of faster and more seamless security screening. Critics also point to research showing that the technology's error rates can differ for people of certain genders or ethnicities.

The CBP maintains that judiciously used facial recognition tools can have a positive impact on the travel space, especially during the pandemic, as they can reduce wait times, the need for physical interactions and the handling of paper documents all at once.

World Bank report notes biometrics' potential for pandemic-related aid delivery

Myriad nations have rolled out initiatives to deliver financial aid to residents hit hard by the pandemic, and emerging evidence suggests that

biometric-based identification measures could be well-suited to verifying recipients. A recent World Bank [report](#) examined how such solutions could be used to help governments more accurately identify pandemic-related aid recipients and factor into nations' vaccine delivery plans. The World Bank pledged more than \$700 million toward its global efforts to bolster the implementation of digital identification and civil registration initiatives last year, it said.

The report comes after the FI conducted a workshop in December that focused on how nations' identification systems are affecting their responses to the pandemic and other events that require them to offer financial support to their residents. The workshop focused specifically on the adoption of biometric solutions to deliver benefits, including the Indian state of Jharkhand's usage of Aadhaar-based authentication to offer welfare aid to recipients and the utilization of biometric-based

verification methods for Pakistan's Benazir Income Support Programme.

SCA implementation has implications for biometric verification solutions in the EU

The European Union's deadline for businesses to implement strong customer authentication (SCA), which requires card issuers to leverage multifactor authentication for all card-not-present (CNP) transactions, passed Jan. 1, [heralding](#) a shift in how the region's merchants will handle CNP payments. Customers will now be required to use at least two distinct verification methods when making CNP transactions, such as typing in passwords and verifying single-use codes delivered to their mobile devices to initiate payments.

eCommerce merchants have been skeptical about SCA's implementation because they worry that the stricter security measures will prompt more potential customers to abandon their carts.

Recent research shows that customers are more security-inclined than these retailers may realize, however, with a 2020 [survey](#) of 8,000 consumers revealing that 76 percent wanted stricter security measures when making payments online. One verification technology that holds particularly strong appeal for consumers who are prioritizing speed and security is biometrics, which is allowed under SCA. These tools can enable EU merchants to offer smooth checkout experiences while also complying with SCA mandates, meaning that biometric verification is likely to see increased implementation as time goes on.

Digital ID developments

UK unveils framework for standards and rules governing digital ID applications

Nations are looking to boost public confidence in the security of digital ID applications as a growing number of organizations implement them. The United Kingdom recently [issued](#) a draft detailing new guidelines, standards and rules governing the usage of digital ID solutions as well as how the information they leverage is shared with other firms and authorities. The UK Digital Identity and Attributes Trust Framework, which is eventually expected to become law, specifies that organizations must present data management policies detailing how data will be obtained, disclosed, protected and deleted. It will also outline industry standards for security and encryption and help consumers choose authenticators offering services that best fit their needs.

The move marks another step in the U.K.'s efforts to digitize consumers' identities and eliminate

the need for national ID cards. Emma Lindley, co-founder of the London-based nonprofit Women in Identity, said the government's collaborative approach to crafting a new digital ID framework is a step in the right direction toward accountability for all parties.

More organizations are turning to passwordless technologies during pandemic, report shows

A global increase in cybersecurity threats during the pandemic is prompting more organizations to seek authentication measures that do not rely on passwords, according to a new [report](#). The report surveyed more than 425 IT professionals to examine key trends regarding the adoption of passwordless MFA technologies. Ninety percent of respondents said that their organizations had experienced phishing attacks in 2020, illustrating the vulnerability of firms that continue to maintain password-based verification solutions. The report noted that the uptick in fraud was prompting more of these firms to seek authentication measures that did not rely on passwords or shared secrets.

Almost 75 percent of respondents stated that replacing such legacy verification methods with smartphone-based passwordless solutions would provide the most seamless and convenient experiences. The report found that just 36 percent are using their mobile devices as Fast ID Online (FIDO) tokens, meaning they rely on unique security keys or some form of biometric identification to verify their identities. This reveals that more education and communication could be necessary to help organizations recognize the security benefits of adopting passwordless authentication solutions.

DEEP DIVE

Modernizing The Banking Experience With Innovative Identity Verification Strategies

The pandemic has driven more consumers to seek the safety and convenience of online banking, yet new data has revealed that banks in Canada and the U.S. may not be doing enough to protect against identity theft or money laundering for the increased volumes of digital banking users. FICO recently [reported](#) that a majority of U.S. and Canadian banks still require customers to prove their identities by visiting branches or submitting documents when opening accounts online. The requirements were similar for 25 percent of mortgages and 15 percent of credit cards opened online as well.

Digitizing legacy onboarding processes calls for banks to enable online account opening while simultaneously adopting identity verification solutions to protect new customers' information. FICO's Consumer Digital Banking study [revealed](#) that just 16 percent of U.S. and Canadian banks offer the ID validation tools required to securely open accounts online. The study also showed that while 75 percent of consumers would be willing to open a bank account online, 23 percent

would abandon the onboarding process if ID verification proved to be too inconvenient or complex. The other challenge financial entities face is that customers have to be willing to help protect themselves for banks' identity protection strategies to be most effective. Only 18 percent of FICO respondents [said](#) they used password management software, and another 18 percent said they simply write their passwords down, leaving much room for improved security.

This month's Deep Dive examines the current state of the customer banking experience and how banks are leveraging innovative identity verification tools to modernize their onboarding processes and prevent users from abandoning account setup.

How biometrics helps narrow the ID verification divide

Making sure that customers' identities are genuine when they sign up for new accounts is the main factor driving most banks to revamp their digital ID verification strategies, with 51 percent of bank executives in one recent study [stating](#) as much. There are several challenges that FIs must first address before putting robust tools into place, however. Banks have strict compliance standards they must meet for onboarding and managing customer information, for example. Meeting those

requirements was the top concern of 53 percent of banking executives in one recent [study](#) when innovating their ID verification strategies.

FIs thus need identity solutions that allow them to comply with digital privacy guidelines and updated financial regulations without adding friction to the onboarding experience. This means moving away from branch visits and paper documents to tools that can identify consumers based on data they have readily available — such as their fingerprints or voices. Biometrics could add the necessary security and speed to ID verification to keep up with both regulatory requirements and consumers' demands.

The good news is that consumers globally are becoming more comfortable with biometrics as their method of choice when verifying their identities online: One recent [study](#) of banking users in the U.K. indicated that 71 percent would provide

biometric data to their chosen FIs. The most popular biometric method appears to be fingerprint scans, with 48 percent of U.K. consumers saying they would be comfortable providing their fingerprints to banks to access their accounts or verify their identities.

This comes as more smartphone manufacturers graft fingerprint scan capabilities into their devices, making biometric tools more accessible to the growing number of consumers who are banking via mobile. American consumers are less enthusiastic about biometrics than their U.K. counterparts, but the technology's popularity is slowly increasing among mobile users. Nearly 16 percent of U.S. mobile banking users in a recent PYMNTS [study](#) stated they preferred to authenticate themselves using fingerprint scans, though only about 9 percent said they actually used this method to access their accounts.

FIGURE 1:

Authentication methods for U.S. online and mobile banking users, by method used and method preferred

Source: PYMNTS.com

This gap between preference and actual usage may exist for several reasons, including the possibility that available biometric options do not offer the speed or security that users would like. Closing this gap could be critical for FIs looking to engage and onboard consumers digitally in the coming years. Many FIs may still face barriers in doing so, however, because consumers are asking not just for biometrics but instead for a whole fleet of digital options from their banks when signing up for new accounts.

Optimizing ID verification for a mobile-first world

Focusing solely on biometrics could be the wrong move for FIs, as consumers appear to be requesting a wide variety of emerging ID verification solutions from potential financial partners. One of the most important factors driving consumers' choice of verification type — and choice of bank — is whether the method is optimized to the banking

channel they are using to onboard. Consumers are searching, in other words, for solutions that are not only digital but also mobile-first.

Tailoring ID verification solutions to run seamlessly on mobile could give FIs a key advantage over their competitors. Consumers are even willing to provide the typical documents FIs need when onboarding as long as they can do so via their phones' cameras. One recent [study](#) found that two out of three U.S. consumers would be willing to take photos of their ID documents as long as doing so would make the onboarding and verification processes safer, faster and more secure.

Staying on top of this rising preference for mobile-first banking requires that FIs approach their ID verification and onboarding strategies so that they work together in a cohesive way. Failing to do so will see banks fall behind on the digital banking curve.

METHODOLOGY

Scoring overview

Companies featured in the Tracker Scorecard have been evaluated based on four primary criteria:

If you would like your company to be considered for inclusion in the Tracker's Scorecard or wish to have an existing listing reconsidered for an update, please head over to our [profile submission/update page](#).

Consumer Data Scorecard – All players are listed in alphabetical order.

01 Systems is a software application and solution provider. Its products include signature management, biometric solutions, enterprise content management and digital vouchers.

Products: Biometric authentication, enterprise content management, signature management

Customer Focus: Financial services

PYMNTS.com

[PYMNTS.com](#) is where the best minds and the best content meet on the web to learn about “What’s Next” in payments and commerce. Our interactive platform is reinventing the way in which companies in payments share relevant information about the initiatives that shape the future of this dynamic sector and make news. Our data and analytics team includes economists, data scientists and industry analysts who work with companies to measure and quantify the innovation that is at the cutting edge of this new world.

jumio

When identity matters, trust Jumio. Jumio’s mission is to make the internet a safer place by protecting the ecosystems of businesses through cutting-edge online identity verification and authentication services that quickly and accurately connect a person’s online and real-world identities. Jumio’s end-to-end identity verification solutions fight fraud, maintain compliance and onboard good customers faster.

Leveraging advanced technology including informed AI, biometrics, machine learning, certified 3D liveness detection and human review, Jumio helps organizations meet regulatory compliance including KYC, AML and GDPR and definitively establish the digital identity of their customers. Jumio has verified more than 225 million identities issued by over 200 countries and territories from real-time web and mobile transactions. Jumio’s solutions are used by leading companies in the financial services, sharing economy, digital currency, retail, travel and online gaming sectors. Based in Palo Alto, California, Jumio operates globally with offices in North America, Latin America, Europe and the Asia-Pacific and has been the recipient of numerous awards for innovation. PYMNTS.COM SHALL HAVE NO LIABILITY FOR ANY INTERRUPTIONS IN THE CONTENT THAT IS PROVIDED AND DISCLAIMS ALL WARRANTIES WITH REGARD TO THE CONTENT, INCLUDING THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT AND TITLE. SOME JURISDICTIONS DO NOT ALLOW THE EXCLUSION OF CERTAIN WARRANTIES, AND, IN SUCH CASES, THE STATED EXCLUSIONS DO NOT APPLY. PYMNTS.COM RESERVES THE RIGHT AND SHOULD NOT BE LIABLE SHOULD IT EXERCISE ITS RIGHT TO MODIFY, INTERRUPT, OR DISCONTINUE THE AVAILABILITY OF THE CONTENT OR ANY COMPONENT OF IT WITH OR WITHOUT NOTICE.

PYMNTS.COM SHALL NOT BE LIABLE FOR ANY DAMAGES WHATSOEVER, AND, IN PARTICULAR, SHALL NOT BE LIABLE FOR ANY SPECIAL, INDIRECT, CONSEQUENTIAL, OR INCIDENTAL DAMAGES, OR DAMAGES FOR LOST PROFITS, LOSS OF REVENUE, OR LOSS OF USE, ARISING OUT OF OR RELATED TO THE CONTENT, WHETHER SUCH DAMAGES ARISE IN CONTRACT, NEGLIGENCE, TORT, UNDER STATUTE, IN EQUITY, AT LAW, OR OTHERWISE, EVEN IF PYMNTS.COM HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

SOME JURISDICTIONS DO NOT ALLOW FOR THE LIMITATION OR EXCLUSION OF LIABILITY FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES, AND IN SUCH CASES SOME OF THE ABOVE LIMITATIONS DO NOT APPLY. THE ABOVE DISCLAIMERS AND LIMITATIONS ARE PROVIDED BY PYMNTS.COM AND ITS PARENTS, AFFILIATED AND RELATED COMPANIES, CONTRACTORS, AND SPONSORS, AND EACH OF ITS RESPECTIVE DIRECTORS, OFFICERS, MEMBERS, EMPLOYEES, AGENTS, CONTENT COMPONENT PROVIDERS, LICENSORS, AND ADVISERS.
